

# DataBeagle - ECA

## eDiscovery of Sensitive Information

A data breach of your customer's personal information can lead to litigation, but not as quickly as the bad press can damage your good reputation. To add insult to injury, you find yourself spending millions to cleanup the mess. Some systems you know store pieces of personal information, such as credit card and personal identification numbers, so you can easily safeguard those, but what about user file shares? And what happens when a customer exercises their right to be forgotten? Will you be ready to fulfill those requests?

### Unlock Value Fast

Your time savings begins the moment the search index is created and increases each time personal information is located amongst your dark data.

### Adopt Seamlessly

There is no need to migrate sensitive data or replace existing systems or processes.

### Optimize Cost

Use this system to identify artifacts for legal hold, to meet regulations, or to prove that you are compliant. Enforce policies and act on your findings with the same solution.

### Operate Efficiently with Content Intelligence (HCI)

Automate functions based on policies that you set. Let the system do the heavy lifting so you can focus on your business.

## Scope of Service What is included?

- Implementation of a highly-secure content platform (HCP) with retention, tiering, and legal hold capabilities
- Execution of a customizable, policy-driven workflow engine (HCI) that connects to multiple sources of dark data
- Tailored user interface for quickly making decisions and acting
- Configuration of audit reporting for compliance
- Add-on module available for electronic communications monitoring capabilities
